

QUIZ 04 PF (BSDSF21) 21-03-2022

Roll No:

Name:

Q-1: Write function to check a string passed as its parameter, contains only digits plus optionally preceded by a + or – sign.

Q-2: Consider the data in the array is non negative and -1 as the sentinel value to represent the absence of data at that array cell. Write a function that transfer all data of an array towards its beginning and sentinels towards its end.

Q-3: Write a function that move data of length **count** from index **from** to index **here** in the array **data**. The function must take care of the array bounds and the security of data to be copied but it should not take of the array being overwritten.
